Arc Flash Hazards and Safety: Training, Protection, and Related Issues

In response to one of the key issues identified in the Safety, Security, and Occupational Health Committee (SSoHC) Survey, this webcast will advance the awareness of hazards associated with arc flashes, and provide safety and protection training.

Water, wastewater, and industrial plants typically operate 24/7 with no power shutdowns, requiring electrical equipment to be worked on while it is energized. This webcast is developed for operations and maintenance personnel, managers, and design engineers interested in learning more about safety and arc flash hazards in these working environments. It will address operator and operations exposure to electrical work at water and wastewater plants. Speakers will share experiences and lessons-learned.

Presentation Team of Safety Experts include:

- Tim Page-Bottorff, Total Safety Compliance, SSoHC Chair and Webcast Moderator
- John Bannen, Severn Trent Services
- Josef Berktold, Donohue and Associates
- Representative from the VWEA EVRAC 2009 Arc Flash Seminar

Webcast Date:

Wednesday, February 24, 2010
2:00 pm – 3:30 pm Eastern Time
WEF Members: $155; Nonmembers: $195

Registration Deadline:

Monday, February 22, 2010
