Odors and Air Pollutants 2020 Conference
Mobile Session Background Information
Submission Deadline: December 5, 2019

This will be the second mobile session held at the Odors and Air Pollutants conference. Mobile sessions allow WEF to bring attendees to selected booths for technical and educational presentations combined with equipment or hands-on visuals. This session is open to any exhibitor who can address the subject matter and is intended to be an interactive, show-and-tell presentation.

Participants will be invited to visit multiple vendor booths to learn more about odor control technology, monitoring options, and real-world applications. Each vendor will highlight a particular technology, including pros and cons, and specific application parameters. Presentations should be approximately 20 minutes in length, and time will be allotted at each booth for Q&A so that participants can obtain project specific information if desired. Three concurrent presentations will be held in individual vendor booths during the Mobile Session.

Presentation Content Guidelines and Suggestions

These sessions are meant to be the anti-PowerPoint learning opportunity. The intent is to provide a hands-on and interactive experience focusing on face-to-face exchanges between vendors, operators, and engineers.

The presenters should highlight, from their perspective, what works and doesn't work for the individual technology they are describing. For example, they should discuss items such as the ideal application, size limitations, calculations, design life, adaptability, and cost for installation, etc. Each presenter should be prepared to develop specific topics of interest based on the request of the Conference Steering Committee. Presentations should fit within the topics of the traditional technical program:

A.	Odor Measurement, Monitoring, and Performance	G.	Innovative Treatment Approaches
B.	Air Dispersion Modeling	H.	Agricultural/Industrial Odor Control
C.	Collection System Odor Control	I.	Odor and Air Regulation
D.	Biological Odor Control	J.	Utility Odor Management and Planning
E.	Corrosion Control	K.	Community Relations and Odor Complaints
F.	Sustainability and Greenhouse Gases	L.	Odor/Air Research and Optimization

Note: The presentation must be <u>generic</u> and cannot have vendor specifics but presenters are encouraged to use the props and product samples within their exhibition booth to make technical points. ***These presentations are technology discussions, not product or proprietary pitches.*** *Presentations will be scrutinized for overt marketing during draft presentation review by the Conference Steering Committee.*

Criteria for Selection

The Conference Steering Committee will review all submissions and develop the final program for the 2020 Mobile Session. Submitters will be notified in early January 2020 of their involvement in the program. Selected presenters will need to abide by the Committee's timeline for content development and by conference registration and exhibition deadlines. **Selected presenters will need to commit to exhibit at the 2020 Odors and Air Pollutants Conference in Cincinnati, OH, if they have not already done so**.

All abstracts must be submitted through the online submission portal, Attendee Interactive (AI). Please visit www.wef.org/OdorsAir to submit your proposal via the online portal.

The submission portal will open on Wednesday, November 13, 2019.
Please submit any program questions to OAP2020@wef.org.
