*This distribution matches the distribution of survey respondents.
** The number of MS4s in this distribution listed in italics reflects a total of 6895 MS4s distributed per the percentages in the column listed in the immediately adjacent column. The number of 6895 is based upon the total number of MS4s ( 7550 ) minus Phll Non-Traditional and State DOT permits ( 605 , 50 , respectively).

\#This distribution is based upon a modification of the information listed in Table 2-2. Specifically, the number of cities with less than 10,000 in population from Table 3 was reduced by half with the remaining half of communities divided into the remaining population bin in proportion to the distribution of communities reflected by counties (Table 2-3) . Specifically, the distribution of communities between 10-50K, 50-100K, 100-500K and 500K-1M or more was used to provide the distribution of the remaining half of small cities assumed to not be in the MS4 program. In this way, elements of both cities and counties are integreated into the overall nature of community size distributions -this reflects that MS4 permits are held by cities in some states/regions an others are held by counties.
