

Where are they now?

Orsolya Renata Hegyi
Kentucky State Winner
2011

An Approach to Water Purification Using Carbon Nanotube Membranes

What are you doing now?

I am a freshman at Dartmouth College, still undecided on a major. My main academic interests are Environmental Studies and Geography but I am also taking courses in economics and the sciences. I am involved with global health related organizations on campus, the club figure skating team, volunteering in the Upper Valley community, and cultural education outreach programs. This summer I hope to participate in a water conservation research and education outreach internship in India.

Did the SJWP competition influence you, and if so, how?

Yes, definitely. Learning about the water systems of Chicago and associated challenges as well as discussing fellow participants' research projects really fueled my interest in water resource management. I still frequently think about the competition and my memories continue to propel my passion for water.

Would you care to give a testimonial about the SJWP?

The SJWP competition was my favorite of all national/international science fairs I attended. The programming, the participants, the accommodations, and the staff were all amazing and unforgettable.
